

## **Acknowledgements 7**

## **Preface 9**

*Pietermel Luning, Frank Devlieghere and Roland Verhé*

*Susanne Knura, Stefanie Gymnich, Ewa Rembalkowska and Brigitte Petersen*

- 1.1 Introduction 19
- 1.2 Quality attributes of food in the production chain 22
- 1.3 Overview of the Food Production Chain and factors affecting quality attributes 30
- 1.4 Quality management activities with respect to safe food production chain 48
- 1.5 Organic food production and safety 54
- References 61

## **2. Biological hazards 67**

*Jordi Rovira, Avrelija Cencic, Eva Santos and Mogens Jakobsen*

- 2.1 Study objectives and structure of chapter 67
- 2.2 Introduction 68
- 2.3 Types of biological hazards 76
- 2.4 Principal means of food contamination (How microorganisms reach food) 120
- 2.5 Microbial growth in food (how microorganisms survive and grow in food stuffs) 127
- References 136

## **3. Chemical hazards 145**

*Bruno De Meulenaer*

- 3.1 Introduction: food intoxications and food sensitivities 145
- 3.2 Basic toxicological considerations 146
- 3.3 Food sensitivities 149
- 3.4 Food additives 156
- 3.5 Residues 163
- 3.6 Environmental contaminants 184
- 3.7 Process contaminants 190
- 3.8 Microbiological contaminants 198
- 3.9 Endogenous toxicants 204
- 3.10 Legislative information and further reading 207
- References 208

## **4. Physical hazards in the agri-food chain 209**

*Anna Aladjajyan*

- 4.1 Introduction 209
- 4.2 Physical Contaminants: definition and classification 209
- 4.3 Non-radioactive physical contamination 210
- 4.4 Radioactive contamination 217
- References 222

## **5. Miscellaneous hazards 223**

*Avrelija Cencic and Krzysztof Krygier (Illustrations by Anton Cencic)*

- 5.1 Objectives 223
- 5.2 Background 223
- 5.3 Genetically modified organisms (GMOs) and associated foods 224
- 5.4 Risk to human health 231
- 5.5 Risk assessment 238
- 5.6 Legislative measures 239
- 5.7 Novel and functional foods 241
- 5.8 Potential risks 245
- 5.9 Legislative measures 246
- References 248

## **6. Quality assurance systems and food safety 249**

*Pietermel Luning, Willem Marcelis and Marjolein van der Spiegel*

- 6.1 Introduction 249
- 6.2 Technological and managerial aspects in quality assurance 253
- 6.3 Principles of Quality Assurance systems 268
- 6.4 Quality assurance systems and assuring food safety 277
- 6.5 Total Quality Management 289
- 6.6 Conclusion 294
- References 295
- Appendix I. Global overview of contents of GMP topics of parts I-III. 298

## **7. Design and implementation of an HACCP system 303**

*Isabel Escriche, Eva Doménech and Katleen Baert*

- 7.1 Introduction 303
- 7.2 Preparation for management in the food industry 309
- 7.3 Requirements before applying HACCP 311
- 7.4 Development of an HACCP plan 330
- 7.5 Implementation 345
- 7.6 Verification and maintenance 347
- 7.7 Future proposal 350
- Acknowledgements 350
- References 351
- Definition of terms used 352

## **8. Steps in the risk management process 355**

*Adriane Mack, Thomas Schmitz, Gereon Schulze Althoff, Frank Devlieghere and Brigitte Petersen*

- 8.1 Introduction 355
- 8.2 Risk assessment 365
- 8.3 Risk management and food safety issues 369
- 8.4 Risk communication and food safety issues 373
- 8.5 Principles of enterprise risk management 386
- References 393

## **9. Modelling food safety 397**

*Frank Devlieghere, Kjell Francois, Bruno De Meulenaer and Katleen Baert*

- 9.1 Introduction 397
- 9.2 Modelling microbial behaviour: predictive microbiology 397
- 9.3 Modelling of migration from packaging materials 417
- 9.4 Risk assessment: a quantitative approach 428
- References 435

## **10. Traceability in food supply chains 439**

*Jacques Trienekens and Jack van der Vorst*

- 10.1 Introduction 439
- 10.2 Relationship between quality systems and traceability in food chains 443
- 10.3 Traceability systems 447
- 10.4 International benchmark study on traceability systems 457
- 10.5 Technology for traceability systems 463
- 10.6 Major research themes and questions for discussion 467
- References 469

## **11. Microbial analysis of food 471**

*Anna Maraz, Fulgencio Marin and Rita Cava (cases by Andreja Rajkovic)*

- 11.1 Introduction 471
- 11.2 Objectives 471
- 11.3 Detection, identification and typing of foodborne pathogens 472
- 11.4 Case studies in detection and quantification/enumeration of pathogens and their toxins 518
- References 522

## **12. Analysis of chemical food safety 525**

*Carmen Socaciu*

- 12.1 Introduction 525
- 12.2 Chemical risk evaluation via food analysis 529
- 12.3 Some examples of chemical analysis protocols for the identification and quantification of chemical risk factors 546
- Abbreviations 556
- References 556

## **13. Modern european food safety law 559**

*Bernd van der Meulen and Menno van der Velde*

- 13.1 Introduction 559
- 13.2 Food law: development, crisis and transition 564
- 13.3 The General Food Law: general provisions of food law 573
- 13.4 The General Food Law: institutional aspects 584
- 13.5 The composition of food 590
- 13.6 Food handling 600
- 13.7 Informed choice: presentation of food products 605

13.8 Globalisation 611

13.9 Conclusion 616

**14. Consumer perception of safety in the agri-food chain 619**

*Wim Verbeke, Joachim Scholderer and Lynn Frewer*

14.1 Introduction 619

14.2 Consumer motivations for food choice 620

14.3 Consumer decision-making and consumer behaviour 620

14.4 Food safety facts versus consumer perception 625

14.5 Food risk perception 626

14.6 Selected cases in food safety perception 629

14.7 Conclusions 639

References 641

**15. Ethics in food safety 647**

*Kriton Grigorakis*

15.1 General introduction to ethics 647

15.2 Principles of food ethics and safety 652

15.3 Special issues in food ethics and safety 666

15.4 Conclusive remarks 674

References 675

**Concluding remarks 679**

*Frank Devlieghere, Pieternel Luning and Roland Verhé*

**Authors 681**
